MIT Press Ltd, United States, 2012. Paperback. Book Condition: New. 222 x 172 mm. Language: English . Brand New Book. Environmental issues often span long periods of time, far-flung areas, and labyrinthine layers of complexity. In *Greening through IT*, Bill Tomlinson investigates how the tools and techniques of information technology (IT) can help us tackle environmental problems at such vast scales. Tomlinson describes theoretical, technological, and social aspects of a growing interdisciplinary approach to sustainability, Green IT, offering both a human-centered framework for understanding Green IT systems and specific examples and case studies of Green IT in action. Tomlinson describes many efforts toward sustainability supported by IT--from fishers in India who maximized the sales potential of their catch by coordinating their activities with mobile phones to the installation of smart meters that optimize electricity use in California households--and offers three detailed studies of specific research projects that he and his colleagues have undertaken: EcoRaft, an interactive museum exhibit to help children learn principles of restoration ecology; Trackulous, a set of web-based tools with which people can chart their own environmental behavior; and GreenScanner, an online system that provides access to environmental-impact reports about consumer products. Taken together, these examples illustrate the significant environmental benefits that innovations in information technology can enable.
